## **EMERGENCY PREPAREDNESS:**

In preparation for the event of an emergency at the site or in our community, KCK has a written plan that will be reviewed by all staff on a semester basis. This emergency plan has been developed to assist Kids Club Kids in protecting the health and safety of the children in its care should a disaster or emergency, be it natural or deliberate, affect the facility, operation or its community. The safety of the children and staff is the primary goal of Kids Club Kids.

1. All staff on duty are responsible for implementing the disaster and emergency plan and ensuring the safety of the children. It is the responsibility of all staff to understand their roles and responsibilities and the location of the supplies in the event of an emergency.
2. Children's daily attendance records are kept in the attendance binder. The children's attendance records are updated as they arrive and leave throughout the day. Children's Emergency Contact Information is kept in the to go binder. In a widespread disaster, we need to be prepared to care for the children in the facility until assistance arrives. Emergency supplies are stored
3. Evacuate the facility to go to another location nearby or far away to remain safe. Evacuation maps are posted. The map outlines where the staff and children will go in the event of an evacuation emergency. Fire and smoke will be announced by the alarm system, isolation of fire and smoke would include confinement by closing doors to the fire area. An emergency phone call will be made to appropriate emergency personnel.

  - Creekside off site location: Spearfish Community Rec Center

## **DISPOSAL OF BIO CONTAMINANTS:**

At Kids Club Kids the following standard precautions will be used any time contact with, or the possibility of contact with, blood and body fluids:

1. Use protective barriers to prevent exposure to blood, body fluids containing visible blood, and other fluids to which universal precautions apply. The type of protective barrier should be appropriate for the procedure being performed and the type of exposure anticipated.
2. Immediately and thoroughly wash hands and other skin surfaces that are contaminated with blood, body fluids containing visible blood, or other body fluids to which universal precautions apply.
3. Use sterile gloves when hand contamination with blood may occur. Use Vinyl or latex examination gloves for procedures involving contact with mucous membranes.
4. Change gloves between contacts with children. Do not reuse surgical or examination gloves.
5. Use general-purpose utility gloves (e.g. rubber household gloves) for housekeeping chores involving potential contact with blood and for instrument cleaning and decontamination procedures.
6. Waste management: To clean spills of vomit, urine, feces, use a commercially available cleaner (detergent, disinfectant-detergent, or chemical germicide cleaner) that will not spoil the surface being cleaned. Remove nasal secretions with tissues and throw them in the ordinary trash. A 1:64 dilution is ¼ cup of bleach diluted in one gallon of water. Use disposable towels or tissues, and rinse mops in the disinfectant solution.
